

In this Lecture we will

- We acquaint ourselves with the **Visual Studio IDE** by creating a simple ASP.NET Web Application *IntroToVSandASPNETwebapps*
  - choose empty website ... add folders and core references for Web Forms
  - this creates a nearly empty site with a stripped down web.config
  - you fill in pieces as needed... manually adding a web form (default.aspx)
  - best starting point because you won't have any extra unnecessary generated files
  - add an image folder (in solution explorer pane)... then copy image files directly there.
  - design and source view
- Learn to add text to the web page and format using Headings (H1...H6)
  - Note: if you center text all the objects on page center
  - Put text in <p> to center only that specific text
- Learn to add images to a web page using a number of methods
  - drag and drop
  - HTML <IMG> control
- Learn to edit in source view with Intellisense
  - add <br />
  - uses XHTML rules
- Learn to title pages
  - in properties
  - choose <DOCUMENT> then modify title
- Learn to view page in browser
