In this Lecture we will

- Create a 2 page web site using web forms *MultiPage*
  - add a hyperlink that goes to the 2nd page using a number of techniques
    - highlight text then click the link button on the toolbar
    - drag the page to link right onto the 1st page then change the <a> tag
  - change the start page of the site
  - add code to the Page_Load event to indicate "morning" or "night" using the DateTime.Now.Hour command ... makes the site a little dynamic
- Offer you an exercise to practice the skills you learned in this lecture
